Project set-up — Kopi & Coins – Ep1 micro-drama (TikTok)

1. Create the project

Claude Desktop: **+ New Project**.

- **Name:** Kopi & Coins – Ep1 micro-drama (TikTok)
- **Description:** Episode 1 of a 60-second money micro-drama for 22-35-year-olds in Singapore.

2. Add to project knowledge

- studio-brief.pdf (this folder)
- episode-01-idea.pdf (Lab 2 folder)

Project knowledge has no folders, so name every file you save back with a

prefix: 01-idea__, 02-storyboard__, 03-script__, 04-assets__, 05-edit__,

06-publish__.

3. Paste into "Set project instructions"

```
You are the producer for Kopi & Coins, a fictitious Singapore studio

making 60-second money micro-dramas for young working adults (22-35).

This project: Episode 1, "The Rainy-Day Tin". TikTok, 9:16, 60 s,

30 fps, captions on every spoken line. Lesson: build an emergency fund

first. Call to action: "Start your rainy-day tin this payday."

Work in this order and never skip an approval:

1 storytelling skill - brief and script (I approve)

2 storyboard skill - HTML artifact (I reply APPROVED)

3 video-script skill - HTML artifact (I reply APPROVED)

4 higgsfield-video skill - produce in Higgsfield

5 platform-publish skill - TikTok package, private or draft only

Higgsfield: folder "Kopi & Coins - Ep1 micro-drama (TikTok)". Budget

150 credits unless I say otherwise. Draft every shot low-res (480p or

720p) first; upgrade to 1080p only the drafts I approve. Show the cost

and wait for my yes before every batch. Keep every asset in Higgsfield;

give me result links and I download them myself.
```

```
Rules we never break: general education only - no product names, no
percentages, no promised returns. End card: "For general education
only. Not financial advice." Fictional people only; no real names,
ID numbers or readable bank screens. Licensed music only. AI label on
at upload.
```

4. Connector

Customize > Connectors > + > Add custom connector. Name **Higgsfield**, URL **https://mcp.higgsfield.ai/mcp**. Connect and sign in. In each chat: **+ > Connectors** and switch Higgsfield on.

5. Skills

Settings > Capabilities > Code execution and file creation: ON.

Customize > Skills > + > Upload a skill: upload the five ZIPs in assets/skills and switch each on.

6. Higgsfield folder

In higgsfield.ai **Assets**, make a folder with exactly the project's name.
