Prompts — Lab 02: Plan the Story with Claude and the Storytelling Skill

Agent: Claude Desktop — the storytelling skill. Paste each prompt as written; change only what the lab tells you to.

PROMPT A — creative brief (storytelling skill)

```
Use the storytelling skill. Read the studio brief in this
project and the attached episode idea.

Write a one-page creative brief for Episode 1, "The Rainy-Day
Tin": audience, the one message, platform and format (TikTok,
9:16, 60 seconds), tone, logline, characters, call to action,
must include, must avoid.

Rules: general money education only. No product names, no
promised returns, no numbers we cannot source. Ask me up to
three questions before you write if anything is unclear.
```

PROMPT B — the 60-second script

```
Using the approved brief, write the script for Episode 1.

Six scenes, timed to exactly 60 seconds:
hook (0-5s), set-up, turn, choice, payoff, end card (55-60s).

For each scene give: time range, what we SEE, voice-over or
dialogue, on-screen text, and sound (music cue or effect).
Keep spoken lines short — under 140 words in total.
End card: "Start your rainy-day tin this payday." plus the
disclaimer from the studio brief.
```

PROMPT C — script review for edits

```
Review script-v1 as a video editor before production.

Make a table, one row per scene: scene, what the scene must
make the viewer feel, the edit types it needs (for example cut,
cutaway or B-roll, match cut, montage, J or L cut, text
overlay, speed ramp, transition, music cue), and why each edit
serves the story.

Then list two scenes where a different edit would be stronger,
and say what you would change.
```

PROMPT D — quality-issue forecast

```
For the same six scenes, forecast the quality issues we are
most likely to meet when Higgsfield generates this episode.
```

```
Group them as: technical (picture and sound), AI generation
(for example face drift, extra fingers, garbled text), story
and continuity, and compliance (music rights, disclaimer,
misleading money claims).

For each issue give the scene, how we would notice it, and
one way to prevent it in the prompt or the edit.
```
