Lab 03 — Storyboard Artifact, Editing Standards and Work Plan

Course: Agentic AI for Video Creation (C436)

Day 1 · Topic 1 · about 60 minutes · slides 84–91

Agent: Claude Desktop — the storyboard skill and artifacts

Features: Character and asset bible · storyboard as an HTML artifact · review and approve · editing standards · work plan CSV

The story so far

The script is approved. Before Claude may send a single shot to Higgsfield, the studio needs an asset bible so Rachel looks the same in every shot, a storyboard you have approved, the editing rules every episode must follow, and a plan with dates.

Your goal

Turn the approved script into the documents a production team — human or AI — works from, and approve the storyboard before any credit is spent.

You'll produce

02-storyboard__ep01-approved.html, the asset bible, editing standards and work-plan.csv in the project

What is in this folder

- `assets/character-bible-template.pdf`
- `assets/storyboard-template.html`
- `assets/editing-standards-template.pdf`
- `assets/work-plan-template.csv`
- `assets/sample/storyboard-approved.html`
- `assets/sample/editing-standards.pdf`
- `prompts.html` — open in a browser; one click copies each prompt into Claude
- `prompts.pdf` — the same prompts, printable
- `evidence/checklist.pdf` — what to capture as proof
- `../prompt-builder.html` — build your own prompt for any stage, genre and platform

Why each step matters

- An asset bible lists the traits that must never change — face, hair, glasses, clothes, the prop. Video models forget; repeating the same five traits in every shot prompt, and animating from an approved reference still, is how you keep Rachel recognisable.

- The storyboard skill writes a self-contained HTML artifact: one card per shot with size, angle, camera move, action, dialogue, on-screen text, sound, asset references and the Higgsfield prompt. Artifacts block outside images and video, so the board stays text and colour — and loads anywhere.
- The approval gate is the point of the artifact. The skill stops and waits; the higgsfield-video skill will refuse to generate until it finds an approved storyboard and script.
- Editing standards are the skill at work here: guidelines every editor (and every agent) follows, written against legal requirements — copyright, personal data, fair money messaging, AI labelling — and platform standards such as loudness, safe areas and captions.
- The work plan is the skill at work here: the post-production stages in order, each with an owner, a duration and a review gate, so the episode can hit its date.

Step by step

1. **Lock the characters** — Prompt A: the asset bible — five fixed traits each for Rachel, Ah Ma and the blue tin, plus a reference prompt for each.
2. **Storyboard as an artifact** — Prompt B calls the storyboard skill. Claude opens a shot-card storyboard marked DRAFT beside the chat.
3. **Pick the camera language** — In the Prompt Builder (Stage Storyboard), tick shot sizes, angles and camera moves for each shot and paste them in as changes.
4. **Review, then approve** — Prompt C requests changes. Only when every shot is right, reply APPROVED; the banner turns green.
5. **Write the standards** — Prompt D: the studio's editing standards and guidelines, legal and platform rules included.
6. **Plan the post-production** — Prompt E gives a work plan; save it as work-plan.csv and set real dates.
7. **Peer review** — Swap storyboards with a partner. Each names one continuity risk in the other's board.

The prompts

PROMPT A — character and asset bible

> Create the asset bible for Kopi & Coins.
>
> For Rachel Tan (29), Ah Ma (74) and the blue butter-cookie tin, give: role in the story, five visible traits that must never change (face, hair, clothing, accessories, colours), how they move and speak, and one reference-image prompt each (front view, neutral light, plain background, 9:16).
>
> Rachel: shoulder-length black hair, round tortoiseshell glasses, mustard-yellow cardigan over a white T-shirt.
> Ah Ma: short silver permed hair, jade bangle, floral blouse.
> Save it to project knowledge as 02-storyboard__asset-bible.

PROMPT B — storyboard artifact (storyboard skill)

> Use the storyboard skill on the approved Episode 1 script.

> Make the storyboard as an HTML artifact: six to eight shot cards for TikTok, 9:16, 60 seconds. Each card: shot ID (S01-SH01), time, shot size, camera angle, camera move (a Higgsfield preset name where one fits), the one action, characters, dialogue or VO, on-screen text, sound, continuity line and asset references.
>
> Faces in the upper third; text clear of the bottom 20% of the frame (35% if you also post to Reels). Respect the 180-degree rule in the video-call scene. Mark it DRAFT and stop for my review.

PROMPT C — request changes, then approve

> Changes to the storyboard:
> - S01-SH01: start on the $1,400 repair quote, ECU, camera [CAMERA_MOVE, e.g. Dolly In].
> - S03-SH01: high angle on the tin, camera Static.
> - Payoff shot: mirror the framing of the hook.
> Keep every other shot unchanged. Show me the new version.
>
> (When every shot is right, reply only: APPROVED)

PROMPT D — editing standards and guidelines

> Write the editing standards: the rules every Kopi & Coins episode must meet before it is published.
>
> Sections:
> 1. Brand: colours, fonts, logo position, end card.
> 2. Story: hook in the first 3 seconds, one message, pacing.
> 3. Captions: always on, accuracy, line length, safe area.
> 4. Audio: dialogue clarity, music under voice, loudness target.
> 5. Legal: music and image rights, no personal data, money messaging (general education only, no promised returns, disclaimer), labelling AI-generated content.
> 6. Platform: 9:16, 1080x1920, frame rate, duration limits, TikTok and YouTube AI-content labels.
>
> Make every rule checkable, with a number or a yes/no test.

PROMPT E — post-production work plan

> Create a post-production work plan for Episode 1 as CSV with columns: stage, task, owner, start day, duration (hours), depends on, review gate, done when.
>
> Stages in order: reference stills in Higgsfield, low-res draft shots, upgrade approved shots to 1080p, assembly in LahLah Video, story review, fine cut, sound mix, captions, technical QC, compliance review, approval, export, publish.
>
> We have 10 working days. Put a human approval gate before publish, and allow one day for regenerating failed shots.

Check your work

- □ The asset bible fixes five visible traits each for Rachel, Ah Ma and the tin, with a reference prompt each.
- □ The storyboard artifact has six to eight shot cards, each with one size, one angle, one camera move and one action.
- □ Every card has a continuity line and asset references.
- □ The storyboard banner reads APPROVED, and the approved file is saved as 02-storyboard__ep01-approved.
- □ The standards cover brand, story, captions, audio, legal and platform — each rule checkable.
- □ work-plan.csv lists every stage with an owner, a duration and a review gate, and fits 10 working days.

If it goes wrong

- **The storyboard has two actions per shot** — Split it. One shot, one action.
- **No artifact appears** — Say: "Show the storyboard as an HTML artifact, not in the chat."
- **Loudness target unclear** — Use -14 LUFS integrated with true peak no higher than -1 dBTP for social platforms; note the broadcast standard (EBU R128, -23 LUFS) for comparison.

Stretch

- Ask Claude to turn the editing standards into a yes/no checklist; you will reuse it in Labs 5 and 6.

> **Standards written down are standards Claude can follow. Standards in your head are surprises at review time.**

Next

Lab 04 — Create Episode 1 with Claude and Higgsfield. Keep what you produced — the next lab starts from it.

Safety

Use only this lab's fictitious characters and data and your own accounts. Never paste an API key, password or personal data into a prompt, a file you share or a screenshot. Nothing is uploaded publicly; upload plans stay private until a person approves.
