Lab 05 — Edit, Review and Refine in LahLah Video

Course: Agentic AI for Video Creation (C436)

Day 2 · Topic 2 · about 80 minutes · slides 126–132

Agent: LahLah Video (or CapCut) + Claude Desktop

Features: Open lahlah-edit.json · voice commands · captions · music · export · story review · technical QC · three fixes · v2

The story so far

The shots are in. Priya watches the assembled cut on her phone and says: "Something's off, but I can't say what." Your job: build the cut, review it twice — once for story, once for technical quality — and fix what matters most.

Your goal

Assemble the episode, assess it against the story and the technical parameters, and propose and make the changes that improve it.

You'll produce

EP01_v1.mp4 and EP01_v2.mp4, a story review, a QC report with values, and a fix log

What is in this folder

- `assets/mock-clips/S01-SH01.mp4`
- `assets/mock-clips/S02-SH01.mp4`
- `assets/mock-clips/S03-SH01.mp4`
- `assets/mock-clips/S04-SH01.mp4`
- `assets/mock-clips/S05-SH01.mp4`
- `assets/mock-clips/S06-SH01.mp4`
- `assets/mock-clips/music-bed.mp3`
- `assets/mock-clips/lahlah-edit.json`
- `assets/mock-clips/captions.srt`
- `assets/voice-commands.pdf`
- `assets/story-review-template.pdf`
- `assets/qc-checklist.pdf`
- `assets/fix-log-template.csv`
- `assets/sample/qc-report.pdf`
- `prompts.html` — open in a browser; one click copies each prompt into Claude
- `prompts.pdf` — the same prompts, printable
- `evidence/checklist.pdf` — what to capture as proof
- `../prompt-builder.html` — build your own prompt for any stage, genre and platform

Why each step matters

- LahLah Video reads the hand-off file Claude wrote: the clips in order, trimmed, with transitions and captions on a 9:16 canvas. CapCut does the same job by hand — import the clips in filename order, then Captions > Import file for the .srt.
- Voice commands make editing hands-free: press Cmd/Ctrl+K and say "split at 3 seconds", "add crossfade" or "export for TikTok". On a Mac, LahLah Voice types the words for you; on Windows, Win+H does the same.
- Review twice, separately. The story pass asks what the viewer feels in each scene. The technical pass measures each parameter against its target. Mixing them gives a muddled list.
- Choose the cheapest fix that works: trim or re-order before re-generating; re-mix the audio before replacing the music; add text in the editor instead of generating it; and when you must re-generate, draft the fix at low res before paying for 1080p.
- A QC report without values is an opinion. Record the number: 1080x1920, 30 fps, 59.5 s, -14.2 LUFS.

Step by step

1. **Open the edit** — LahLah Video > Open edit > lahlah-edit.json. No credits left? Open mock-clips/lahlah-edit.json instead.
2. **Finish the rough cut** — Clips speak and music is laid. Sit the music under the voices, add the end card text, check captions.
3. **Export v1** — Export for TikTok: 1080x1920, 30 fps, H.264 MP4.
4. **Story pass** — Watch on your phone. Prompt A: a scene-by-scene story review with Claude.
5. **Technical pass** — Read the export info; Prompt B turns your readings into a QC report with PASS or FAIL.
6. **Fix three things** — One re-made shot in Higgsfield (Prompt C: low-res draft, then 1080p), one audio fix and one caption or text fix in LahLah Video.
7. **Export v2 and re-check** — Re-run the failed parameters. Record each fix in the fix log.

The prompts

PROMPT A — story review

> I watched EP01_v1 on my phone. Here are my notes per scene:
> [YOUR NOTES]
>
> Make a story review table, one row per scene: intended feeling, the feeling it actually creates, and one specific change that would strengthen the story and emotion (pacing, shot order, reaction shot, music, text). Then rank the three changes that matter most.

PROMPT B — technical QC report

> Here are the readings for EP01_v1:
> resolution [W x H], frame rate [FPS], duration [SECONDS], loudness [LUFS] and true peak [dBTP], caption errors [N], continuity notes [NOTES].

> Check each against the editing standards in this project.
> Return a table: parameter, value, target, PASS or FAIL,
> evidence, fix. Use the cheapest fix that works.

PROMPT C — re-make one shot (higgsfield-video skill)

> Use the higgsfield-video skill. Re-make [SHOT_ID] only, from the
> approved reference still, with this change: [CHANGE].
> Camera [CAMERA_MOVE]. Draft it low-res first and show me; only
> after I approve, upgrade it to 1080p on the final model. Show
> the cost of each step, file both jobs in the Ep1 Higgsfield
> folder, and update lahlah-edit.json with the new src.

COMMANDS — read the file (optional, FFmpeg)

```
# resolution, frame rate and duration
ffprobe -v error -select_streams v:0 \
  -show_entries stream=width,height,r_frame_rate:format=duration \
  -of default=nw=1 EP01_v1.mp4

# integrated loudness (LUFS) and true peak (dBTP)
ffmpeg -i EP01_v1.mp4 -af loudnorm=print_format=summary -f null -
```

Check your work

- □ EP01_v1.mp4 exported at 1080x1920, 9:16.
- □ The story review covers every scene with intended vs actual feeling and a specific change.
- □ The QC report has at least six parameters with values, targets and PASS or FAIL.
- □ Three fixes made — one in Higgsfield (drafted low-res first), two in the editor — each in the fix log.
- □ EP01_v2.mp4 passes every parameter that failed in v1.
- □ Screenshots of the LahLah Video timeline and the export settings saved as evidence.

If it goes wrong

- **LahLah Video will not open the JSON** — Check that the clips sit beside it with the same names; or import the clips by hand and load captions.srt.
- **Voice command not understood** — Open the cheat sheet (voice-commands.pdf) and use the exact wording.
- **Export is soft** — Export at 1080p, not 720p; check you used the upgraded 1080p clips, not the low-res drafts.

Stretch

- Cut a 15-second teaser from the same clips using only voice commands.

> **Fix the cut, not the credits. Most problems disappear with a trim, a re-order or a caption — regenerate last.**

Next

Lab 06 — Build a Compliance Skill and Plan Remedial Actions. Keep what you produced — the next lab starts from it.

Safety

Use only this lab's fictitious characters and data and your own accounts. Never paste an API key, password or personal data into a prompt, a file you share or a screenshot. Nothing is uploaded publicly; upload plans stay private until a person approves.
